

GEMCOM SURPAC™

Geology and Mine Planning

What's New: Gemcom Surpac 6.1

With enhancements to Geostatistics, a new CAD-like drafting mode, and improved integration with other systems, Surpac 6.1 enables you to be more productive than ever before.

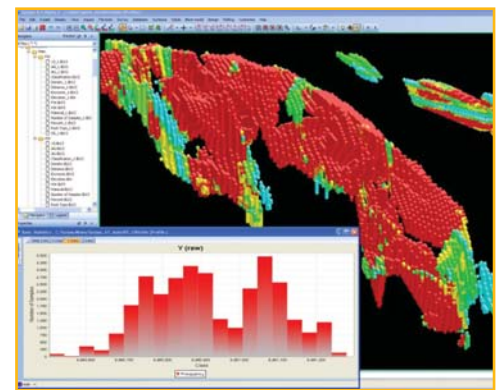

Gemcom Surpac is the world's most popular geology and mine planning software. It delivers efficiency and accuracy through ease-of-use, powerful 3D graphics and workflow automation.

Geostatistics Just Keeps Getting Better

Our updated and easier-to-use Geostatistics module will help make you even more productive:

- New interface for basic statistics and variogram modelling.
- View multiple statistics at once.
- Can now display multiple variograms.
- Two new variogram types: Hole effect and Gaussian.
- See variogram lags as horizontal bars.
- New variogram lag marker position calculation.
- New indicator variogram map.

Viewing a GEMS block model in Surpac with enhanced Geostatistics.

New Drafting Mode

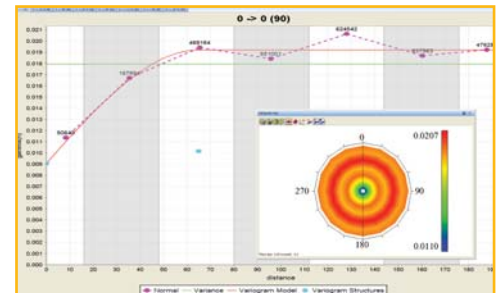

Another delivery in our mission to be more CAD-like:

- Move an item by a fixed distance and bearing.
- Digitise points at specified angle and distance.
- Digitise at a specified offset distance from an existing segment.

Integration With Other Systems

We're continuing to make it easier for you to work and interact with your other important systems:

- More flexible and easier integration with Gemcom Whittle™.
- Direct and automated import from acQuire.
- Direct read of the Gemcom GEMS™ block model.

Improved presentation of variogram maps.

True Width Calculation In Compositing

- Added to composite by geology and graphical compositing.

Under The Hood

The graphics engine has been updated. Also, Surpac 6.1 now meets Microsoft Windows file and data location standards.

For a complete list of new features, enhancements and fixes, see the Release Notes available on the Surpac 6.1 CD, www.gemcomsupport.com, or from your nearest Gemcom sales office.
